

Patient Safety Program Manager Job

Location: San Antonio, TX, US

Description

Key Role:

Direct the establishment and operations of the Military Health System Patient Safety Program (MHS PSP) at the Military Treatment Facility (MTF) level and work closely with MTF leadership to promote a culture of safety throughout the MTF. Recommend and aid in the implementation of process improvements leading to the formulation of policies to affect safer care. Facilitate risk assessment at all levels of patient care and institute mechanisms to determine the level of assessment required. Categorize reported events into Near Miss, Actual Event, and Sentinel Event and work with credentials management and other departments to assess the competency of Air Force Military Service (AFMS) personnel. Establish a mechanism to orient and educate staff on risk identification, risk assessment, and risk control principles and practices. Facilitate the facility-wide implementation of healthcare team training through various DoD training venues, including Train-the-Trainer and Train-the-Staff Onsite and Awareness. Conduct Root Cause Analysis (RCA) on patient safety events to identify causal factors and establish action items to correct or improve processes and systems to eliminate or decrease the risk of the event reoccurrence.

Qualifications:

- 2+ years of experience with cases in a clinical trial setting
- Experience with civilian accreditation and the Military healthcare system
- Experience Patient Program Management required
- Ability to obtain a security clearance
- BS degree required

Additional Qualifications:

- Experience with Microsoft Office, including Access, Excel, and SQL for relational database use
- Experience with Military health systems
- Knowledge of root cause analysis
- Knowledge of failure mode effect analysis
- Possession of excellent oral and written communication skills
- BS degree in Nursing, Healthcare Administration, or a related medical field
